Velocrosshairs.com — Implementation & AdSense Readiness Report

Generated: 28 October 2026 · Site: https://velocrosshairs.com · Discord: https://discord.gg/wHZQyb5PZ

1. Why AdSense was rejected (summary)

Google flagged **Low-value / thin content**: hundreds of similar crosshair code pages, limited editorial depth vs. URL volume, and duplicate description patterns. Technical crawl issues (robots, sitemap, www, canonical) were also addressed separately.

2. What we implemented (technical)

Area	Implementation	Status
robots.txt	200 response, allow/disallow rules, sitemap link	**Done**
www → non-www	301 redirect on all pages (nginx)	**Done**
sitemap.xml	No login/register/query URLs; blogs + category hubs + indexable crosshairs only	**Done**
Canonical tags	Non-www HTTPS; filters → /crosshairs; category hubs self-canonical	**Done**
noindex	Login, register; non-indexable crosshairs; filter/search listings	**Done**
Indexing gate	`is_indexable` field; sitemap limited to top 150 crosshairs	**Done**
Duplicate guard	Admin blocks matching description openings on save	**Done**
Crosshair pages	Code breakdown (parsed settings), DB meta title/description, blog links	**Done**
Category hubs	/crosshairs/category/{slug} + long_description in admin	**Done**
Schema.org	HowTo + FAQ (home), Breadcrumb (crosshair), Article (blog)	**Done**
Auth spam	Math captcha on login & register	**Done**
Admin SEO	Crosshair filters, live search, indexable toggle, dashboard stats	**Done**
Copy crosshair	Clipboard copy fixed on detail page	**Done**
Discord	Footer + top bar + mobile menu	**Done**
Download route	Named redirect /download → /crosshairs (fixed broken route name)	**Done**

3. Current site metrics (live DB)

Metric	Value	Target before re-apply
Active crosshairs	613	—
Indexable crosshairs (sitemap)	150	≤ 150 (quality over quantity)
Published blogs	18	**25–40+ recommended**
Duplicate description groups (same first 50 chars)	12 groups	**0 groups with 5+ duplicates**
Category hub pages	3 URLs live	**400+ words long description each (admin)**

4. Functionality issues found & fixes

- **Fixed:** Copy Crosshair button did not copy code to clipboard.
- **Fixed:** Footer social hover hid icons (CSS specificity).
- **Fixed:** `route('download')` missing name — redirect now named.

- **Fixed:** Nav category links now use SEO hub URLs (`/crosshairs/category/…`) not query strings.
- **Removed:** Non-functional “Add to Favorites” on crosshair detail page.
- **Open:** TikTok footer link still placeholder (#) — add real URL or remove.
- **Open:** ~463 crosshairs are noindex until manually approved or descriptions rewritten.
- **Open:** 12 duplicate description pattern groups — rewrite intros in admin.
- **Content:** No duplicate blog *titles* detected; continue adding unique guides.

5. Content tasks (your team — not automatic)

1. Admin → Categories → fill **Long Description** (400+ unique words) for Teams, Fun, Other.
2. Rewrite duplicate crosshair intros; enable **Allow Google indexing** only on quality pages.
3. Publish 7–22+ new blog posts (guides, pro crosshairs, import tutorials).
4. Promote Discord community: https://discord.gg/wHZQyb5PZ

6. How to re-apply to AdSense (recommended timeline)

1. Run: `php artisan crosshairs:sync-indexable --limit=150` after content updates.
2. Google Search Console: submit sitemap https://velocrosshairs.com/sitemap.xml
3. Wait **2–4 weeks** for recrawl; check indexed pages drop for thin URLs.
4. Verify: robots 200, www 301, no login in sitemap, indexable count ~150.
5. Re-apply in AdSense when blogs ≥ 25 and duplicate intro groups are cleaned.

7. Useful commands

```
php artisan migrate
php artisan crosshairs:sync-indexable --limit=150
php artisan route:clear && php artisan view:clear
```

8. Reference docs in repo
